

BUILDING HEATING APPLIANCE

RELIABLE PERFORMANCE, CONSTRUCTION AND SAFETY

**YOU DESERVE THE CERTAINTY OF SCHEBLER
FACTORY-BUILT BUILDING HEATING APPLIANCES.**

THE CERTAINTY OF SCHEBLER

Every building heating appliance project is different, but the most successful have the same thing in common—they are backed by the certainty of Schebler.

Because only Schebler provides the highest quality, custom-configured, built-to-order systems that maximize performance, efficiency, safety and profitability while minimizing risk.

At Schebler, we focus relentlessly on helping our customers design and install systems that are driven by their specific needs, built with products that are guaranteed to perform as promised, and backed by support that will always be there when they need it.

THE CERTAINTY OF SAFETY

Only Schebler gives you the certainty of reliable performance, expert prefabricated construction and made-in-America quality.

Our technical experts engineer and custom-build each heating appliance system for maximum building and employee safety. Our prefabrication process ensures each of our products will meet or exceed your building-specific requirements.

For our competitors, complex system designs and limited building spaces create challenges for the proper venting of boilers and similar equipment, which is critical for safe and effective operation. Only Schebler delivers the certainty of consistent performance, time and time again.

With Schebler Factory-Built Building Heating Appliances, You Get:

SUPERIOR QUALITY CONTROL

FASTER AND EASIER INSTALLATION

LOWER ON-SITE COSTS

UL 103 LISTED PROTECTION

**TESTED AND PROVEN FOR RELIABILITY
AND DURABILITY**

THE CERTAINTY OF PREFABRICATION

Schebler products are more affordable, more consistent and can be designed at a higher quality than field-fabricated ones.

Prefabricated Building Heating Appliances have become the established replacement for traditional field-welded assemblies due to the considerable time savings and cost-effective safety in handling high temperatures and exhaust gas pressures. By producing and building our products in our U.S. factory, Schebler gives you the certainty of highly engineered and controlled manufacturing to deliver reliable, top-performing products, every time.

Field-fabricated Building Heating Appliances, on the other hand, are typically made from sections of Schedule 40 carbon steel pipe, welded in the field, and then insulated. This complicates installation and does not provide the quality control inherent in Schebler's supervised factory environment.

THE CERTAINTY OF PRODUCT VARIETY

The P Series is perfect for many different applications.

Our P Series chimney products are available in a wide variety of models. Lightweight and UL listed, they pair exceptional quality with minimal clearance, increasing usable square footage in buildings.

THE CERTAINTY OF STEADFAST SUPPORT

Since Schebler was founded in 1895, we have fabricated high-quality, innovative products designed and built with expert craftsmanship and backed by impeccable support.

In 2022, we initiated an ESOP (Employee Stock Ownership Plan) to give everyone at Schebler the certainty of ownership. Our ESOP also ensures our customers receive certainty of solid customer support from our highly motivated employee-owners.

OUR INDUSTRY-LEADING SUPPORT INCLUDES:

- Extended warranties
- Fast turnaround times
- Made-in-America quality
- Uncompromising service from our team of dedicated employee-owners
