

Model P2A

**PREFABRICATED
STAINLESS STEEL VENT**

DELIVERING THE
CERTAINTY OF ADDED
SAFETY AND INSULATION,
UL LISTED VENTING

MODEL P2A

PREFABRICATED STAINLESS STEEL VENT

OUR P SERIES CHIMNEYS ARE THE HIGHEST-QUALITY GENERAL-PURPOSE VENTS AVAILABLE.

Part of our UL listed P Series, Model P2A is designed and built with 2" of insulation and a 1" air gap between the liner and the shell for use in venting appliances.

LISTING

The Schebler Model P2A chimney and exhaust system is listed by Underwriters Laboratories Inc. (UL) under file number MH17739 in the United States and Canada for the following uses. It also has the Underwriters Laboratories mark for Canada (cUL).

UL 103

A 1,400°F chimney, a 1,000°F Building Heating Appliance Chimney for positive pressures to 60" WC for high-temperature applications.

UL 2561

A 1,400°F Building Heating Appliance Chimney for positive pressures to 60" WC intended for venting flue gases at a temperature not exceeding 1,400°F under continuous operating conditions, from building-heating appliances and other low-heat appliances.

UL 1978

Use for grease exhaust duct serving commercial cooking appliance hoods.

The system is also approved by the New York City Department of Buildings for use in New York City. MEA # 227-94-M.

SYSTEM CONCEPT

The Model P2A is a modular, double-wall, prefabricated exhaust system with 2" insulation and a 1" air gap for use in venting appliances that require a positive, neutral or negative draft exhaust system. Sections are provided in lightweight, easy-to-handle lengths and connected with the RapidLock® Connection System with high-temperature sealant. Straight sections, expansion joints, tees, elbows and support devices are offered, allowing a complete exhaust system to be assembled using standard components.

SURROUNDINGS

Model P2A chimneys are suitable for use with building heating appliances and other low-heat appliances as described in the Chimney Selection chart of the National Fire Protection Association Standard Number 211, which produce flue exhaust gases not exceeding 1,400°F under continuous operation or 1,800°F under intermittent operation. These chimneys are to be installed as required for metal chimneys. They are not to be enclosed within combustible construction. An unenclosed chimney may be placed adjacent to walls of combustible construction at the clearances specified.

COMPLETE LINE OF FITTINGS AND SIZES AVAILABLE

The Model P2A chimney system is available in even and odd diameters, ranging from 5" to 48". A complete line of straight sections, expansion joints, tees, elbows, rain caps, roof penetration components and support members is available. In addition to the standard components, virtually any conceivable fitting is available as a special-order item.

SUPPORT LIMITS

Support plates and wall supports are utilized to support the weight of the chimney and to provide a fixed point to allow proper operation of expansion joints. In horizontal runs, supports should be placed adjacent to fittings not otherwise supported. See the individual part description for allowable support charts.

MATERIAL AVAILABLE

The Model P2A is available in a variety of materials, allowing the proper material selection for your specific application. The standard product features a 304 stainless steel liner and 430 stainless steel outer shell. For greater corrosion resistance, 316 stainless steel is available for the liner and 304 or 316 stainless steel for the outer shell.

For most applications, the standard 304 stainless steel inner and 430 stainless steel outer material selection is sufficient. For boilers firing oils heavier than No. 2 fuel oil, use 316 stainless steel for the inner shell.

MATERIAL THICKNESS

The standard 304 stainless steel inner shell thickness is 0.036" for 5" to 36" diameter systems and 0.048" for 38" to 48" diameter systems. Standard 430 stainless steel outer shell thickness is 0.028" for 5" to 36" diameter systems and 0.048" for 38" to 48" diameter systems.

TESTS PERFORMED

The Model P2A has endured rigorous tests by Underwriters Laboratories. Just a few of the tests performed are:

STRUCTURAL TESTS

The support plates and wall supports have been physically tested to carry a load four times that allowed by our listing.

WIND LOAD TESTS

Loads equivalent to 110 mph wind have been applied to the chimney with acceptable results.

SKIN TEMPERATURE RISE TESTS

The chimney has been subjected to a series of burn tests at temperatures up to 1,800°F. The purpose of these tests is to determine safe clearances from the chimney wall to combustible materials.

RAIN TESTS

The rain caps have been tested to ensure an unsatisfactory amount of water does not enter the rain cap.

SCHEBLER VALUE

FAST PROJECT COMPLETION

- Trouble-free installations/detailed instructions
- No on-site welding

MAXIMUM STRENGTH/LONG LIFE

- Unmatched dimensional accuracy for secure joint connections
- Fully welded liners and shells
- Unequaled support limits

COMPLETE SYSTEM DESIGN

- CAD drawings
- 3D design solutions
- Complete BOM
- System sizing

SPECIAL FITTINGS

- Customized components are available to meet the needs of your specific project

OPERATING TEMPERATURES AND CLEARANCES CHART

The Model P2A has been tested and listed for continuous use at both 1,000°F and 1,400°F, as well as for use as a grease duct at the following clearances to combustible materials. The clearances shown are from the shell to combustibles.

P2A CLEARANCE TO COMBUSTIBLES		
Section Inside Diameter	1,000°F (560°C) Chimney*	1,400°F (760°C) Chimney

Clearance to non-combustible materials for all diameters and applications is 1" (25mm).

PART NUMBERS

All standard parts manufactured by Schebler are identified by a part number which describes their makeup and function.

The part numbers are made up as follows:

1. The first series is the model designation: PA, P1, P2, P2A, P4 or SW.
2. This is followed by the part name. For example, 47S, 90T or CC.
3. Next is the part's internal diameter in inches, such as 06, 12 or 24.
4. Last is the liner/shell material designation.

For example, the part number for an 8" ID, Model P2A, 47" long straight section with a 304 stainless steel liner and 430 stainless steel shell is P2A-47S-08N.

CODE	LINER / SHELL MATERIAL
A	304 / Aluminized
B	316 / Aluminized
C	304 / 304 or all 304
D	304 / 316
E	316 / 316 or all 316
F	Galvanized
G	Aluminized
H	Painted Carbon Steel
N	304 / 430
P	316 / 430
Q	430
S	316 / 304

JOINT ASSEMBLY

Note: Wipe the inner bands and flanges clean prior to assembly.

Steps:

1. Apply a continuous bead of proper sealant, covering one of the 1/2" flanges of the two parts being joined.
2. Fully fill the vee groove of the inner band with the proper sealant.
3. Join the flanged ends of the two sections together.
4. Install the inner band around the flanges and rotate the flange bolt into the corresponding notch of the clip and tighten both bolts.
5. Tap around the inner band with a rawhide mallet and retighten the flange bolts until they bottom out to ensure a tight joint.
6. Place the outer band over the space between the outer shells of the adjoining sections. The flanges on the outer band fit into the grooves on the shells.
7. Rotate the flange bolt into the corresponding notch of the clip and tighten both bolts evenly until secure. For outdoor installations, apply a bead of S600 sealant in the groove at the upper end of the outer band.

SEALANT

Schebler offers three types of sealant: S600, S2000 and S2001. The S600 is used for applications with flue gas temperatures up to 600°F (315°C). This includes most boilers and water heaters. The S2000 is used for grease duct systems. S2001 is used for installations operating under positive pressure, such as generator exhaust.

SYSTEM COMPONENTS

CUSTOM DIMENSIONS ARE AVAILABLE TO SUIT YOUR NEEDS IN EVEN AND ODD SIZES.

ADAPTER KIT (FLANGED)

PART NO. BKF

The Adapter Kit (Flanged) is used for securing a pipe to a flanged appliance outlet. Beam clamps are provided for the connection of the flanges, or the flange can be drilled in the field to match the appliance.

Includes one inner band and one seal ring to cover the gap between the inner and outer shells.

ADAPTER KIT (RAW)

PART NO. BKR

The Adapter Kit (Raw) is used for securing a pipe to an unflanged appliance outlet.

Includes one inner band and one seal ring to cover the gap between the inner and outer shells.

ADJUSTABLE LENGTH

PART NO. 18AL, 22AL, 30AL AND 45AL

The Adjustable Length is used to provide adjustments during installation, as well as to compensate for thermal expansion between fixed points.

Adjustments in length available for each part is as follows:

18AL is 14" to 17"

22AL is 16" to 21"

30AL is 20" to 29"

45AL is 27 1/2" to 44"

Includes one inner and one outer band.

VARIABLE LENGTH SECTION

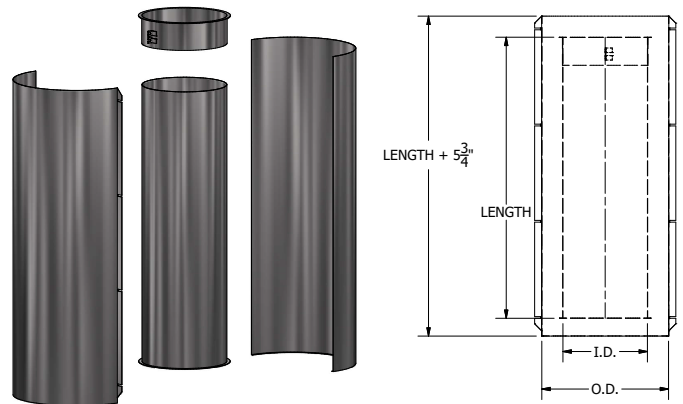

PART NO. 18VS, 29VS AND VS

The Variable Section adjusts to provide a fixed odd length between two sections.

The minimum length is 5" and the maximums are 18", 29" or 40".

This part does not provide for thermal expansion.

Includes liner, shell, slip joint and one inner band.

ABRUPT INCREASER

PART NO. AI

The Abrupt Increaser is used to connect two sections of different diameters in a shorter space than a tapered increaser.

Includes one inner band of larger and smaller sizes and one seal ring.

SYSTEM COMPONENTS

CUSTOM DIMENSIONS ARE AVAILABLE TO SUIT YOUR NEEDS IN EVEN AND ODD SIZES.

TAPERED INCREASER

PART NO. TI

The Tapered Increaser is used when a change in pipe diameter is required.

Includes one inner band and one outer band of both smaller and larger sizes.

ECCENTRIC TAPERED INCREASER

PART NO. ETI

The Eccentric Tapered Increaser is used when a change in pipe diameter is required and maintains an eccentric profile when it is necessary for the pipe to be flat on one side.

Includes one inner band and one outer band of both smaller and larger sizes.

ORIGINAL REDUCING 90° TEE

PART NO. OR90T

The Original Reducing 90° Tee is used to join horizontal and vertical sections of different sizes, as well as provide for a connection to drain or inspection fittings. Use either the drain tee cap or the end cap for closure of the unused opening. Specify the size of the branch required.

Includes one inner band and one outer band for larger and smaller openings.

90° WYE

PART NO. 90Y

The 90° Wye is used for joining runs where low flow resistance is desired. All openings must be the same size. For connection to smaller diameter sections, use the tapered or abrupt increasers.

Includes two inner bands and two outer bands.

FLASHING

PART NO. FL

The Flashing is used in conjunction with the rain collar to seal roof penetrations. This part is designed for flat roofs. Custom-pitched flashings are available upon request.

RAIN COLLAR

PART NO. RC

The Rain Collar is used in conjunction with the flashing to seal roof penetrations.

INSULATED THIMBLE

PART NO. IT

The Insulated Thimble is used when penetrating a combustible wall or roof. This part is designed for flat roofs. Custom-pitched thimbles are available upon request.

SYSTEM COMPONENTS

CUSTOM DIMENSIONS ARE AVAILABLE TO SUIT YOUR NEEDS IN EVEN AND ODD SIZES.

RAIN CAP PART NO. CC

The Rain Cap is used at stack terminations to prevent rainwater from entering the flue. A drain should be used at the base of the stacks to drain off water that may be blown into the flue.

Includes one inner band and one closure ring to seal the outer shell joint.

FAN ADAPTER PART NO. FA

The Fan Adapter is used to attach a grease duct to an exhaust fan or kitchen hood.

Includes one inner band and one outer band.

Note: Plenum boxes are available for multiple-fan systems.

SYSTEM COMPONENTS

CUSTOM DIMENSIONS ARE AVAILABLE TO SUIT YOUR NEEDS IN EVEN AND ODD SIZES.

TOP SECTION

PART NO. TS

The Top Section is used to protect the insulating space between the inner and outer shells when an open termination is required. A drain should be used at the base of the stacks to drain off water that enters the system.

Includes one inner band and one closure ring to seal the outer shell joint.

GUY SECTION

PART NO. GS

The Guy Section is to be used when the chimney extends beyond the vertical limits above the roof line. The guy section should be connected to guy wires or a rigid guying structure.

Includes two half-outer bands.

Note: This part must be placed at the connection of two flue sections.

SUPPORT PLATE

PART NO. SP

The Support Plate is the primary load-carrying member of the chimney assembly. This part is designed to support (B) (see chart below) feet of vertical chimney section as well as provide fixed points in breaching runs.

Includes two half-outer bands.

Note: This part must be placed at the connection of two flue sections.

WALL SUPPORT

PART NO. WS

The Wall Support is used to provide chimney support along a wall. The wall support will maintain the required clearance to combustible structures when properly installed and can support (C) (see chart below) feet of vertical chimney.

Includes two half-outer bands.

Note: This part must be placed at the connection of two flue sections.

FLOOR/ROOF GUIDE

PART NO. FRG

The Floor/Roof Guide is used at the penetration of floors and roofs to guide the chimney. This part is designed to absorb lateral loads only. It will not support vertical chimney sections.

FULL RING

PART NO. FR

The Full Ring is used to guide horizontal and vertical runs. The part is simply bolted around the outer shell, then rigidly connected to the building structure.

HANGER

PART NO. HG

The Hanger is used to support long horizontal runs, placed under the flue and then supported by rods connecting to the building structure.

PRESSURE RELIEF VALVE

PART NO. PRV

The Pressure Relief Valve is used in generator exhaust systems to prevent damage resulting in the ignition of unburned fuel. This component complies with NFPA 37.

Valves are set to 1 PSI.

Includes one inner band and one seal ring to cover the gap between the inner and outer shells.

SYSTEM COMPONENTS

CUSTOM DIMENSIONS ARE AVAILABLE TO SUIT YOUR NEEDS IN EVEN AND ODD SIZES.

SQUARE-TO-ROUND TRANSITIONS

The Square-to-Round Transitions are used when connecting to appliances with square or rectangular outlets. The base can be raw for field welding or flanged for field drilling and bolting.

Note: This part will be custom-built/coordinated with the design team for each application.

SAMPLE SPECIFICATION

MODEL P2A

The factory-built, modular chimney shall be laboratory tested and listed in accordance with Underwriters Laboratories Standard UL 103, Standard for factory-built chimneys for building heating appliances, UL 2561, Standard for 1,400°F factory-built chimneys for use with building heating equipment burning gas, solid or liquid fuels with flue gases not exceeding 1,400°F continuous operations and 1,800°F intermittent operation for a 10-minute duration. It shall also be tested and listed for use as a Grease Duct in accordance with UL 1978. Sections shall bear the UL listing mark and cUL listing mark for Canada. Sections shall be sealed with banded flanges and joint sealant specific to the application.

Inner shell material shall be type 304 stainless steel for natural gas and number 2 oil-fired appliances, type 316 stainless steel for coal, number 4 and number 6 oil-fired appliances. Inner shell thickness shall be .036" for 5" to 36" diameter systems and .048" for 37" to 48" diameter systems. All inner shell seams shall be full penetration welded the entire length of the pipe section. Riveted, tacked or spot-welded seams are not permitted.

Outer shell material shall be 430 stainless steel with a thickness of 0.028" for 5" to 36" diameter systems and 0.048" for 37" to 48" diameter systems. All outer shell seams shall be full penetration welded the entire length of the pipe section. Riveted, tacked or spot-welded seams are not permitted.

Between the inner and outer shells there shall be a minimum 1" air gap and 2" of 1,600°F rated low conductivity ceramic fiber insulation. The insulation is to be securely attached to the inner shell with steel straps and insulating pins welded to the inner shell. Stainless steel centering clips shall be welded to the outer shell to maintain the 3" spacing and ensure concentricity of the shells.

Breeching and chimney sections, when installed according to the manufacturer's instructions, shall comply with national safety standards and building codes. Stacks terminating above a roof must terminate as required by code or NFPA 211.

SCHIEBER

5-YEAR WARRANTY MODEL P2A STANDARD

The Schebler Model P2A Chimney, where installed according to the manufacturer's installation instructions, is warranted by the Schebler Company for a period of five (5) years from the date of system start-up against defects in material and workmanship of the product for parts only. Any defective part in the product will, at Schebler's option, either be repaired or replaced. Should the part be returned, the owner must pay all transportation charges. The repaired or replacement part will, in turn, be shipped by Schebler to the owner, freight prepaid. The warranty on any repaired or replacement part shall be for a duration of time no longer than the remaining or unexpired term of the original warranty.

This warranty does not cover labor or other service charges incurred by the owner, nor any parts not manufactured by the Schebler Company, or any other components that are not part of the Model P2A chimney systems.

This limited warranty is extended to the purchaser, subject to the satisfaction of the following conditions:

1. Generally accepted engineering practices have been followed to determine that sizing and material specifications are suitable for the application and environment involved.
2. The undamaged components have been correctly installed in accordance with the installation instructions published by the Schebler Company at the time of shipment.

The Schebler Company assumes no liability for incidental or consequential damages of any kind or for any damages resulting in whole or in part from misuse, improper installation or inadequate maintenance of the system or component part thereof. This warranty is in lieu of all other express warranties or guarantees of any kind. All implied warranties, including merchantability and fitness, are limited to the duration of the express warranty contained herein. The Schebler Company neither assumes nor does it authorize any other person to assume on its behalf any other liability in connection with the sale of its products.

10-YEAR WARRANTY MODEL P2A EXTENDED

The Schebler Company warrants owners of its Model P2A Chimney against defects in material and workmanship in normal use for ten (10) years from the date of delivery to the construction site when installed, maintained and used as part of a Schebler Model P2A chimney system and in accordance with the Schebler Company specifications. The Schebler Company further warrants any portion of the chimney system repaired or replaced under this warranty for the remainder of the original warranty period.

This warranty is limited to the repair or replacement of the product, plus shipping costs, to the failure location. This warranty does not cover any labor costs for removal or replacement of the defective product, nor does this warranty cover any system components not furnished by the Schebler Company and installed as part of the system.

This limited warranty is extended to the purchaser, subject to the satisfaction of the following conditions:

- 1.** System sizing and design has been performed by Schebler personnel and design parameters provided to the Schebler Company by the responsible engineer were and are accurately representative of the operating conditions.
- 2.** The undamaged components have been correctly installed in accordance with system design and sizing as performed by Schebler and installation instructions published by the Schebler Company at the time of shipment.
- 3.** Proper precautions have been taken to ensure that appliance air is free of solvent or refrigerant vapors or any halogenated compound which may cause acid condensate to form within the chimney.
- 4.** The Schebler Company has supplied the entire chimney or exhaust system from the appliance outlet to the termination of the stack.
- 5.** Prior to start-up and thereafter, exposed aluminized steel surfaces are protected with a minimum of one base coat of primer and one finish coat of heat-resistant paint at all times.

The Schebler Company assumes no liability for incidental or consequential damages of any kind or for any damages resulting in whole or in part from misuse, improper installation or inadequate maintenance of the system or component part thereof. This warranty is in lieu of all other express warranties or guarantees of any kind. All implied warranties, including merchantability and fitness, are limited to the duration of the express warranty contained herein. The Schebler Company neither assumes nor does it authorize any other person to assume on its behalf any other liability in connection with the sale of its products.

Model P2A

PREFABRICATED STAINLESS STEEL VENT FROM SCHEBLER

The P Series is not only the industry's highest-quality general-purpose stainless steel vent, but P2A products also provide the lowest cost of entry for a double-wall, UL 103 listed product in the industry. P2A products are also UL 1978 and UL 2561 listed.

All Schebler prefabricated chimney systems are known by the value they provide through unmatched dimensional accuracy and detailed draft calculations. These translate into fast project completion, lowered installation costs and satisfied customers.

With Schebler, we are certain you will find what thousands of our customers have found: we exceed expectations by providing high-quality products and services through a culture of empowerment, continuous improvement and innovation. Since our founding in 1895, we have fabricated high-quality, innovative products designed and built with expert craftsmanship and backed by impeccable support. Contact Schebler for more Information about our chimney solutions, including help with custom engineering and design solutions.
